FOR IMMEDIATE RELEASE

PEST CONTROL AND FERTILIZATION THROUGH YOUR SPRINKLER SYSTEM Texas Entrepreneur Obtains Patent on Revolutionary Product

Small business owner S. Robert Hill of Cypress, TX has recently obtained the patent rights to an exciting new product called the Retrofit Irrigation Distribution System. “The R.I.D. System fits inline with your existing in ground sprinkler system to effortlessly distribute pest control products and fertilizer to your lawn and landscape.” says Robb Hill president of R.I.D. Systems, Inc. The idea of chemigation, as it is collectively known, has been around for many years, primarily used in agriculture and large commercial applications such as golf courses and nurseries. “The previous technology was not created for residential and light commercial systems.” states Mr. Hill who is a licensed Professional Inspector and Certified Pest Control operator in Texas. “When I discovered this technology could be used in the residential market I jumped in head first. I had never seen anything like it. What a great idea – I had to have it!” He enthusiastically continues “This will change the landscape of the home industry in a way not seen since the introduction of the microwave. We hope to have one in every home.”

What makes the product unique is the ability to tailor the system to meet your specific needs all while improving neighborhood appeal, reducing the spread of insect borne diseases and eliminating harmful products that pollute our environment. The R.I.D. System will provide control of common pests such as ants, mosquitoes, roaches, spiders, fleas and even mice to name only a few as well as fertilize your lawn and landscape. “All at the touch of a button.” exclaims Hill, “adding the system eliminates the need for costly and unreliable pest control operators or lawn treatment companies” and “will do a better job at a fraction of the cost.” The system typically sells for under \$300.00, is very easy to use and any do-it-yourselfer can install the R.I.D. System in just minutes. Once installed simply add the product you want, run the sprinkler zone for one minute and you’re done. Typically, the products will last up to four weeks but as Mr. Hill reveals “we’ve heard of them lasting much longer... it just depends on your particular environment and target application.”

Elaborating on safety and reliability Mr. Hill affirms; “that is at the forefront of our concerns and one of the primary obstacles that had to be overcome.” The system was designed by NASA engineers and is very durable, safe and reliable as it has no moving parts and works on simple engineering principles. “We also sell and recommend the use of all natural, EPA exempt and organic products” Hill says, “which caters to our customers concerns.” It should be pointed out that the system can be used with other water soluble or liquid products available from most home centers or nurseries but “should only be applied in accordance with label instructions” cautions Hill. “As a pest control professional I am exposed to products that the general public may not be aware of or have access to.” These products and the R.I.D. System are made available via their web site: www.RidSystem.com.
